Author's Abstract: The Dynamic Web Development with ASP.NET Course teaches the basics of web page layout and design using standard HTML elements. Interactive ASP.NET pages are created using web controls provided in the Visual Web Developer Toolbox and Visual Basic.NET code. Students are taught how to write code to respond to various web control events such as button clicks and page loads. A brief review of key Visual Basic.NET programming concepts is provided. The student is an employee at a fictitious design company called Curlique Studios whose client is a real band, Maktub. In each lesson of this course, the student will develop a feature for Maktub's website.

Contents: Learning web page layout and design

Keywords specified:

Web Design

Web Development

ASP .NET

HTML

Visual Basic
